

CUSTOM DESIGN AREA

We frequently work with architects, designers, engineers, and installers to solve special project needs with innovative, creative, spectacular, and visually stunning solutions.

Home to our most skilled professionals, the Custom Design Area specializes in tackling unknowns to help close envelopes effectively while doing it with style.

We've clad bay windows in copper, patio walls in zinc, hospital doors in stainless, arched decks in curved anodized aluminum, and fireplaces in weathering steel. Inside or outside, you get to be the free-thinking, limitless, imaginative designer, and let us solve the manufacturing details.

We offer plenty of everyday solutions to exterior problems, and make a large volume of custom chimney caps, vents, aluminum architectural details, and custom commercial downspout and elbows.

EVERYTHING IS POSSIBLE AT TRIMET, AND THE ANSWER IS ALWAYS YES.
