

CUSTOM FLASHING

We manufacture custom flashing with speed, service, and accuracy. Our ERP-based operation delivers on time, every time. With Trimet, you're not worried about your crews waiting around for metal.

We have the largest fleet of computerized brakes in Western Canada, and offer single and double bending beam equipment as well as press brakes, in a variety of lengths up to 21 feet long.

Our capacity is about 3000 pieces per shift. Need that capacity in a hurry? We can help.

We offer a huge variety of inventory, and have steel on hand in many different colours, gauges, and coatings. We offer the same in aluminum, stainless, weathering steel, zinc, copper, and laminated.

We offer film when needed to ensure a perfect finish when required.

Trimet helps educate your team to take custom orders, and brand products with your logo. You use your sales expertise to better leverage existing relationships, and think of us as your virtual metal shop ready and willing to produce on demand. The best part is you don't need inventory or space: all you need is an appetite to sell!

We offer shipping across North America and will meet your timeline.

We offer custom cut blanks to your desired width and length, and custom slit coil to length, using our coil service centre. If your bottleneck is cutting blanks or slitting coil, we can help.

We custom manufacture your material and store it for you to be processed as necessary on demand.
